

Application instructions

M3FIRE Water Spot Remover

Maintains and conditions coatings of the Modesta line. Used to remove light water spots on the top of the protection layer.

- 1. Wash the vehicle** Thoroughly wash the vehicle to remove all dirt and contamination. The vehicle should be at least semi-dry after washing, therefore either dry the vehicle or blow off water with compressed air.
- 2. Apply to a microfiber and spread** Apply two sprays of M3FIRE to a clean, high quality microfiber and spread evenly on the affected parts of the surface. You should not spray directly onto the surface to avoid exposure of unwanted areas! Wipe off and repeat if necessary.
- 3. Wash off thoroughly with water** Wash off thoroughly with plenty of water, best with a pressure washer.

Additional notes

Always ensure that surface is properly cleaned before application. Do not apply to contaminated and dirty surfaces. Test on an inconspicuous place before applying. Never apply at windy or dusty place, in rain, direct sunlight or heat. Surface should have mild (room) temperature before application. Avoid working in too cold or too hot environments. Apply at well-ventilated place.

Do not apply on recently repainted parts. If you are using Modesta on a new car or a car that has been painted, make sure that the paint is properly cured before application. In some cases, the paint on new cars might still be fresh and not fully cured. If you are unsure about the curing stage of the paint then you should wait 4-8 weeks after the vehicle was handed over to you.

Do not combine with other products than those recommended.

Apply only to painted surfaces - never apply to glass, unpainted plastic parts, tires or rubber.

Frequently asked questions

1. How often should I apply M3FIRE to a vehicle protected with Modesta?

Only if required. M3FIRE is a potent cleaner that can remove water spots and some stubborn dirt (for example insects). Using M3FIRE too often might weaken the durability of the coating. M3FIRE is also suitable for removal of heavy road grime build up on lower parts of vehicles, especially during winter periods in regions that expect snowfall.

2. Should I leave the product on the paint for some time to maximize its effect?

A few seconds, maximally 30 seconds is enough. The product will not perform better if left longer.

3. Can I use M3FIRE on other surfaces than protected paint?

Yes, you can use M3FIRE on paint that was protected by a Modesta coating or on paint that is unprotected. You can use M3FIRE on paint that was protected by other products, however we can not guarantee any results nor exclude negative reactions. You can use M3FIRE safely on glass.
