BC-06

Heat Resistant Hard Glass Coating for Wheels & Body

Stain resistance and ease of cleaning are the most prominent characteristics of the BC-06 glass coating, thanks to the hardness of the coating film. This thin silica film made from perhydropolysilazane protects the car body and wheels from dust in raindrops that may penetrate soft paints or other painted surfaces and can be removed only with great effort. Thanks to the BC-06 protection, washing is required less frequently.

BC-06 undergoes a chemical reaction when it comes in contact with a painted surface, creating a hard glass coating. It has a tightly packed molecular structure that creates a solid, long lasting surface. BC-06 is heatproof up to 1,300 °C - enough to protect wheels from burning-hot brake dust.

Scratch protection	● ● ● ● ●
Self-cleaning	● ● ● ● ●
Maintenance	● ● ● ● ●

Modesta BC-06 requires occasional maintenance and delivers long-term protection. It is especially suitable for high performance sport cars.

Maintenance should always be performed by a professional with the required skills and equipment. The Modesta M1 SHOT and Modesta H-04 Shampoo with water repellent effect should always be used for maintenance of a vehicle protected by BC-06.
