

# Maintenance Program

A complete solution for the long term care  
of your Modesta paint coating system.

*Modesta*<sup>®</sup>   
 PLUS CREATION TECHNOLOGY

The regularity of your car washes hinges upon its exposure and miles driven. A car driven more or exposed to harsher elements such as rain, snow, dust, dirt, mud, etc. will require more frequent washes than a car that is driven one day every two weeks. Pay attention to the needs of your car, wash as needed and follow the wash instructions of your Modesta installer. Once your car has been washed, use the following, easy to use, maintenance sprays to condition your Modesta coating. Using them, along with regular car washes will give the best results and will protect your investment. A once per year check up at your installation facility is suggested.

Always use your maintenance sprays on surfaces that are cool, not in direct sunlight and freshly washed.

### **M3 Fire**

For water spots or tree sap that show up on the coating, use the M3 Fire. Mist onto a clean microfiber towel, agitate and then rinse the surface with water while ensuring no residue is left over on any surfaces. Do not leave on a surface for more than 30 seconds. Repeat as necessary.

### **M4 Smoke**

This deep cleanser is a means to keep your coating structure pure and clean. It allows your Modesta coating to maintain its water behavior characteristics. After the car has been washed but before it is dried, mist M4 Smoke onto a panel, agitate with a clean and water-wetted wash mitt. Wait 2-3 minutes and rinse from the surface. Repeat across the whole car.

### **M2 Blast**

M2 Blast plays the role of an upper layer of protection for your Modesta paint coating system. M2 Blast can be applied to a freshly washed car that is still wet or a freshly washed car that is dry. Mist M2 Blast onto a clean microfiber towel, wipe the M2 Blast on the clean and cool surface of the coated paint. Flip the towel to a dry side and lightly buff the surface until it is free of residue.
